

Acquire™

Endoscopic Ultrasound Fine Needle Biopsy Device

As physicians strive to improve diagnostic outcomes and gather more tissue for histopathological analysis we have introduced the Acquire™ Endoscopic Ultrasound Fine Needle Biopsy Device to support oncology research:

1. 3 pronged Franseen tip is designed to maximize tissue capture and minimize fragmentation, which may result in improved diagnostic yield and specimen adequacy
2. Echogenic pattern allows for visibility of the needle under EUS
3. Cobalt Chromium (22ga, 25ga) and Nitinol (19ga Flex)
4. Custom sheath sizes designed to improve passability
